Patent No. 5683864

GENERAL INFORMATION:
APPLICANT: Houghton, Michael
APPLICANT: Kho, George
TITLE OF INVENTION: Combinations of Hepatitis C virus (HCV)
TITLE OF INVENTION: Antigens for Use in Immunoassays for Anti-HCV Antibodies
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  88 GHLTAGLQAHG-HYDPDKTGKHEGPLG-NGHKGDLPRLVVKADGIAKETLLAPRLTVKE- 144

```
This sequence represents an immunogenic polypeptide, SodC, which is capable of eliciting the production of antibodies against L. intracellularis when administered to an avian or porcine animal. This polypeptide can be used in a vaccine composition for the prophylaxis or treatment of intestinal infection of an animal by Lawsonia. The DNA ce encoding SodC polypeptide may be used in a vaccine vector such that the SodC polypeptide is expressible at a level sufficient to confer immunity against Lawsonia. The polypeptide is useful for diagnosing infection of a gainst Lawsonia. The polypeptide is useful for diagnosing infection of a correct or not the animal has suffered from a past infection or is currently infected with L. CC intracellularis or a microorganism that is immunologically cross-reactive confer in this is done by contacting whole serum, blood lymph nodes, illenu, caecum, small intestine, large intestine, faceces or rectal swab derived from the animal with the immunogenic polypeptide or an antibody raised against it. Probes derived from the Lawsonia DNA are useful for detecting L intracellularis or related microorganisms by hybridization. The SodC polypeptide is useful in the preparation of a medicament for the conference of treatment and prophylaxis of porcine proliferative enteropathy (PPE)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New Acinetobacter baumanii proteins and nucleic acids, useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, or as biocontrol agents for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful for preparing a vaccine composition against Klebsiella pneumoniae.
                                       The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for disgnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents the amino acid sequence of an A.
                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Recombinant expression vector; transcription regulatory element; Klebsiella pneumoniae protein; antibacterial; Vaccine.

```
The sequence is that of the 20kD Brucella abortus copper-zinc superoxide dismutase (CuZnSOD) which is used as part of a method for detecting B. abortus infection in animals, in particular Bovine brucellosis. The method can distinguish between animals which have a natural infection and those which have been vaccinated. CuZnSOD or a segment effective as an antigenic determinant is combined with a body fluid sample and the

                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (I) an assay for the detection of a particular g protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for detecting the gressence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treathing immune-related diseases, growth-related diseases, cell regeneration-related disease, immunological-related cell proliferative
                                                                                                                                                                                                                                                                                                                                                     G protein-coupled receptor, GPCR, antigenic peptide, gene therapy, G protein-coupled receptor modulator, antibody, immune-related disease; growth-related disease; call regeneration-related disease; AIDS; cancer; immunological-related cell proliferative disease; autoimmune disease, Alzheimer's disease, atherosclerosis, infection, ostecarthritis; allergy; osteoprosis; cardiomyopathy; inflammation; Crohn's disease; diabetes; graft versus host disease; Parkinson's disease; multiple sclerosis; pain; psoriasis; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; obesity; nausea; hypertension; hypotension; renal disorder; rheumatoid arthritis; trauma;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid (1) from Ashbya gossypii comprising; (a) 63 fully defined nucleotide sequences (ABL60128-ABL60157) given in the specification; or (b) a fragment of (a). Cells that express (1) show altered production of fine chemicals, particularly: (a) organic, amino or fatty acids; (b) purine and pyrimidine bases; (c) nucleotides or nucleosides; (d) lipids; (e) diols; (f) carbohydrates; (g) aromatic compounds; (h) vitamins (particularly riboflavin); (i) co-forentic and (i) enzymes. These chemicals are useful in the food, fodder, commetic and pharmaceutical industries (I) are also useful for identification and characterisation of A. gossypii and related organisms
diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, atherosclerosis, bacterial, fungal protozoan or viral infections, osteoarthritis, osteoprorosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, arxiety, depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoasays and immunodiagnosis. ABZ42523 to ABZ42869 encode GPCR proteins given in ABD81675 to ABBR2018, which are used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid from Ashbya gossypii, useful, when modulated, for
producing fine chemicals, e.g. amino acids, encodes stress-associated

0157:H7-specific nucleic acid molecule. A polynucleotide of the invention has anti-bacterial activity. The polypeptide can be used in detection and/or treatment of 0157:H7 infection. The nucleotide sequence of the genome of Enterchaemorragic E coli 0157:H7 was determined. The present sequence represents an E. coli 0157:H7-specific polypeptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Enterohemorragic Escherichia coli 0157:H7-specific nucleic acid molecule and a polypeptide and its use, a polypeptide, a vector and a host cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Flavobacterium; sulphated fucogalactan digesting enzyme; polysaccharide; sulphated fucogalactan; structural analysis; sugar engineering reagent; sulphated fucogalactan degradation; cancer; viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention relates to a novel enterohaemorragic Escherichia coli
                                                                                                                       Enterohaemorragic E. coli 0157:H7-specific protein SEQ ID NO: 476.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 175
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  4.4%; Score 8; DB 7;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel enterohaemorragic Escherichia coli 0157.H7-specific nucleic acid molecule. A polynucleotide of the invention has anti-bacterial activity. The polypeptide can be used in detection and/or treatment of 0157.H7 infection. The nucleotide sequence of the genome of Enterohaemorragic E coli 0157.H7 was determined. The present sequence represents an E. coli 0157.H7-specific polypeptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Enterohemorragic Escherichia coli O157:H7-specific nucleic acid molecule and a polypeptide and its use, a polypeptide, a vector and a host cell.
and as primers and probes for detection and amplification of (I). The encoded polypeptides (ABB77446-ABB77475) are useful as markers for specific gene regions, in genomic mapping and for functional studies on proteins and for evolution or protein structure investigations. Modulating activity of (I) may improve yields, production and/or efficiency of production of fine chemicals by A. gossypii. Particularly the cells show a more robust response against stress, so viability and productivity are improved, particularly in large-scale bioreactors.                                                                                                                                                                                                                                                                                                                                                                              à
                                                                                                                                   The present invention describes polypeptides (P) derived from digest aniphated fucopacidate ans. Also described. (1) polypeptides with digest sulphated fucogalactans. Also described. (1) polypeptides with similar activity derived from (P) by addition, deletion and/or similar activity derived from (P) by addition, deletion and/or substitution of one or more amino acid residues, or at least 30% homologus to them; (2) nucleic acids (1) encoding the polypeptides; (3) expression vectors containing the nucleic acids; (4) hosts transformed by these vectors; (5) a method for the preparation of the polypeptides by culture of the transformed hosts; (6) sulphated fucogalactan digestion products obtained by polysaccharide digestion using the polypeptides; (7) a screening method for genes encoding polypeptides having sulphated fucogalactan digesting activity, using nucleic acids (1) or their partial sequences as probes; and (8) a method for the structural analysis of polysaccharides, and for the preparation of the structural analysis of polysaccharides, and for the preparation of sulphated fucogalactan degradation products for use as antigens for the preparation of antibodies for the diagnosis of diseases including cancer and viral infection. The present sequence represents Flavobacterium sfgA, which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

genes for muscarinic acetyl:choline receptors - for drug screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying agonists of G protein-coupled receptors (GPCRs) for use in disease treatment, comprises contacting candidate compounds with versions of GPCRs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to G protein-coupled receptors (GPCRs) for which the endogenous ligand has been identified. Non-endogenous constitutively activated versions of known GPCRs are used in the invention for the intertination of candidate compounds as receptor agonists, inverse agonists or partial agonists. Such agonists are useful as therapeutic agents for diseases or disorders associated with GPCRs. The present sequence is a non-endogenous version of a known human GPCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; G protein-coupled receptor; GPCR; non-endogenous; mutant;
constitutively activated GPCR; agonist; disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

protein. The invention relates to a polymorphic, muscalling of the CHRMS generation relates to a polymorphic variant of the CHRMS generation relates to a polymorphic sequence. The polymorphic sequence is useful to genotype or haplotype the CHRMS gene, to predict a haplotype pair for the CHRMS gene, and for identifying an association between a trait (such as a clinical response to a drug targeting CHRMS). It is also useful in gene therapy in patients who lack the CHRMS; isogene or have only one copy of it, and in assays to measure the binding affinities of one or more candidate drugs targeting CHRMS. The DNA sequence is used in the treatment of disorders affected by expression or function of a novel CHRMS isogene of the invention. The protein encoded by the CHRMS variant is useful to identify drugs which target the CHRMS polymorphic variant protein. Antibodies against the protein can be used to neutralise the CHRMS isoform activity expressed in an individual, and is useful in detection of CHRMS in immunocytochemical, immunofluorescence. A composition containing a genotyping oligonucleotide for detecting a polymorphism in the CHRMS gene is used to detect novel CHRMS polymorphisms of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated polynucleotide encoding the cholinergic receptor, muscarinic 5 (CHRM5), used to genotype/haplotype the CHRM5 gene, and to identify an association between a trait and a polymorphism, comprises novel

```
The present invention relates to a new cholinergic receptor, muscarinic 5 (CHRM5) polynucleotide comprising a sequence which is a polymorphic variant for a reference sequence for the CHRM5 age or its fragment, or a polymorphic variant of a reference sequence for a CHRM5 colon or its fragment. The invention is useful in drug screening assays. The molecules of the invention are useful in studying the expression and function of CHRM5, and in expressing CHRM5 protein for use in screening for candidate drugs to treat diseases related to CHRM5 activity. The methods of the invention are useful in developing diagnostic tests and therapeutic candidate drugs for treating specific condition or disease associated with CHRM5 activity and is useful in determining whether an individual associated with CHRM5 activity and is useful in determining whether an individual useful in a variety of diagnostic and prognostic formats and therapeutic methods. The invention is also useful in genotyping and/or haplotyping to the CHRM5 gene in an individual. The present amino acid sequence in an individual or the CHRM5 gene in an individual or the CHRM5 gene in an individual or the chromate and prosphere in an individual or the CHRM5 gene in an individual or the chromic and sequence in an individual or the CHRM5 gene in an individual or the chromate and therapeutic or the CHRM5 gene in an individual or the chromic or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the chrome or the ch
                                                                                                                                                                                                                                                                                                                                              Human, cholinergic receptor muscarinic 5, CHRM5, genotyping; haplotyping, single nucleotide polymorphism; SNP; chromosome 15q26.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        human CHRMS protein of the invention. This sequence is human CHRMS gene located on chromosome 15q26
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel cholinergic receptor, muscarinic 5 polynucleotide useful therapeutically and in screening for candidate drug to treat diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

```
The present invention relates to a new cholinergic receptor, muscarinic 5 (CHRM5) polynucleotide comprising a sequence which is a polymorphic variant for a reference sequence for the CHRM5 gene or list fragment, or a polymorphic variant of a reference sequence for a CHRM5 cDNA or its polymorphic variant of a reference sequence for a CHRM5 cDNA or its fragment. The invention is useful in studying the expression and function of CHRM5, and in expressing CHRM5 protein for use in screening for candidate chross to treat diseases related to CHRM5 activity. The methods of the invention are useful in developing diagnostic tests and therapeutic treatments. The method is also useful in the design of clinical trials of candidate drugs for treating specific condition or disease associated with CHRM5 activity and is useful in developing whether an individual has one of the hablotypes or one of the hablotype pairs. The invention is also useful in genotyping and/or haplotyping the CHRM5 pariant protein of the invention which shows represents the human CHRM5 variant protein of the invention which shows in the specification but is derived from the wild-type human CHRM5 protein the specification but is derived from the wild-type human CHRM5 protein can be considered to the specification but is derived from the wild-type human CHRM5 protein
                                                                                                                                                    Human; cholinergic receptor muscarinic 5; CHRM5; genotyping; haplotyping;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel cholinergic receptor, muscarinic 5 polynucleotide useful therapeutically and in screening for candidate drug to treat diseases related to the receptor activity.
                                                                                                                Human cholinergic receptor, muscarinic 5 (CHRMS) variant protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Denton RR, Nandabalan K;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 532;

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABPB2019 to ABPB3619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avoidity for a particular GPCR. (I) can be used as CPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific particular and antibodies and antibodies and antibodies and antibodies and antibodies and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for
                                                                                                                                           G protein-coupled receptor; GPCR; antigenic peptide; gene therapy; G protein-coupled receptor modulator; antibody; immune-related disease; growth-related disease; call regeneration-related disease; AIDS; cancer; immunological-related cell proliferative disease; autoimmune disease; Alzhenner's disease; atherosclerosis; infection; osteoarchritis; allergy; osteoporosis; cardiomyopathy; inflammation; Crohn's disease; diabetes; graft versus host disease; Parkinson's disease; multiple sclerosis; pain; psoriasis; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; obesity; nausea; hypertension; hypotension; renal disorder; rheumatoid arthritis; trauma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         treating immune-related diseases, growth-related diseases, cell regeneration-related diseases, growth-related diseases, cell regeneration-related disease, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, AIDS, AIDHeimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergises, crohi si disease, diabetes, graft versus host disease, parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  loss, pilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode GPCR proteins given in ABPB1675 to ABPB2018, which are used in the exemplification of the present invention
                                                                                                  Human muscarinic acetylcholine receptor M5 protein SEQ ID NO:195.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Fig 1; 523pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (LIFE-) LIFESPAN BIOSCIENCES INC.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel method for the treatment of a subject having a metabolic disorder exhibiting aberrant muscarinic acetylcholine receptor MS polypeptide activity or aberrant MS nucleic acid expression which comprises administering to the subject an MS modulator. MS nucleotides and polypeptides play a role in or function in acetylcholine signalling pathways which are involved in regulation of metabolic function. The MS modulators of the invention may have immunomodulator, anorectic or anabolic activity. The invention is useful for identifying a compound capable of treating a metabolic disorder such as aberrant food intake, obesity, cachesity, an anorexia. The present sequence is that of the human MS protein which was used during the identification of the MS modulators of the invention.

The invention relates to a method of identifying a compound useful in the treatment of AIDS (acquired immunodeficiency syndrome) or an HIV (human immunodeficiency virus) -related disorder. The invention involves assaying the ability of a test compound to modulate the activity or expression of 6 human proteins. These proteins and nucleic acids encoding them (ADE40422-ADE40473) are differentially expressed in tissues relating to AIDS or an HIV-related disorder compared to their expression in normal tissues. The invention also relates to the use of the compounds identified to modulate viral replication in a cell and to treat a patient with AIDS or an HIV-related disorder. The invention further discloses methods for the diagnostic evaluation and prognosis of various HIV-related disorders, and for the identification of individuals exhibiting a predisposition to such conditions. The modulatory compounds identified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .

The invention relates to human and mouse G protein-coupled receptors

(GPCRs) and nucleic acids encoding them. The invention also relates to
sequences at least 99% identical to the GPCR proteins and nucleic acids

of the invention; methods of treating, preventing or diagnosing diseases

associated with GPCRs of the invention; methods of screening for
compounds useful in the treatment of GPCR-related disease; a transgenic
mouse comprising a GPCR gene of the invention; a mouse comprising a
mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived
from the trasngenic mice; kits comprising several mice, each of which has
from the transgenic mice; kits comprising several mice, each of which has
mutation in a different GPCR gene of the invention and kits comprising
probes which hybridise to GPCR polyuncleotides of the invention. The
invention further discloses variants of the GPCR polypeptides and vectors
comprising a GPCR nucleic acide and proteins may
be used in the diagnosis, treatment or prevention of a wide variety of
diseases including neurological disorders (e.g., Alzheimer's disease,
depression, diabetic neuropethy, Parkinson's disease or schizophrenia);
disorders of the adrenal gland, disorders of the colon or intestine
syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or
                                                                                                                                                                                                                                   G protein-coupled receptor; GPCR; drug screening; diagnosis; transgenic mouse, neurological disorder; adrenal gland disorder; colon disorder; intestinal disorder; cardiovascular disorder; muscular disorder; blood disorder; immune disorder; bone disorder; miscular disorder; blood disorder; immune disorder; cancer; kidney disorder; liver disorder; nutritive disorder; cancer; kidney disorder; uterus disorder; prostate disorder; testis disorder; skin disorder; thyroid disorder; prostate disorder; spleen disorder; thyroid disorder; antiparkinsonian; antimanic; oytostatic; antiinflammatory, vasotropic; antidiarnhoeic; antidiabetic; virucide; hepatotropic; antibacterial; antidiarnhoeic; dermatological; antiulcer; antithyroid; antialergic; antidiabetic; dermatological; antiulcer; antithyroid; antialergic; anticeborrhoeic; dermatological; antiulcer; antithyroid; antialergic; anorectic; immunosuppressive; nephrotropic; gene therapy; GPCR modulator; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel mammalian G protein coupled receptors, useful for identifying compounds that modulates diagnosing and treating disease condition associated with GPCR dysfunction e.g. autoimmune diseases, angina
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaitanaris GA, Bergmann JE, Gragerov A, Hohmann J, Li F;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     05-JUN-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ADC37562;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ADC37562
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g
                                                                                                                                                                                                                                                               furcation in a different GPCR gene of the inventions GPCR gene, cells derived from the transgenic mice; kits comprising several mice, each of which has a mutation in a different GPCR gene of the invention; and kits comprising probes which hybridise to GPCR polymolecides of the invention. The invention further discloses variants of the GPCR polypeptides and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of diseases including neurological discorders (e.g., Alzheimer's disease, depression, diabetic neuropathy, Parkinson's disease or schizophrenia); celsorers of the adrenal gland; discorders of the colon or intestine (e.g., Crohm's disease, diarrhoea, food poisoning or irritable bowel syndrome); cardiovascular discorders (e.g., anglia, cardiac arrhythmia or mocardial infarction); muscular discorders; blood disorders (e.g., anamemia or leukaemia); immune disorders; blood disorders (e.g., anamemia or leukaemia); immune disorders; (e.g., autoimmune disorders (c.g., carcation deficiency-related diseases) and disorders (e.g., osteoarthritis, rheumatoid diseases); and disorders (e.g., osteoarthritis, rheumatoid diseases); and disorders (e.g., osteoarthritis, prostate, testis, skin, stomach, pancreas, spleen, thymms and thyroid (e.g., cancers). The present sequence represents a GPCR of the tive invention. Note: The full sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ·;
                                                               The invention relates to human and mouse G protein-coupled receptors (GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention; methods of treating, preventing or diagnosing diseases associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic mouse comprising a GPCR gene of the invention; a mouse comprising a mutation in a GPCR transgene or in an endogenous GPCR gene, cells derived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Flavobacterium, sulphated fucogalactan digesting enzyme, polysaccharide, sulphated fucogalactan, structural analysis; sugar engineering reagent, sulphated fucogalactan degradation, cancer; viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .

                                          Gandhi AR;
                                                                                                                                                                                                                  New human nucleic acid associated proteins (NAAP), useful for diagnosing, treating and preventing diseases or conditions associated with the aberrant NAAP expression e.g. cancer, AIDS, atherosclerosis, epilepsy, or
                                                                                                                                                                                                                                                                                                                                 The present invention relates to novel human nucleic acid associated protein (NAAP) (1, ADC37534-ADC37593) and their coding sequences (}. The NAAPs and their coding sequences are useful in diagnosing, treating and preventing diseases or conditions accorded with the decreased expression or over expression of NAAP, such as cell proliferative (e.g. cancer, atherosclerosis), neurological (e.g. epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. AIDS, allergies) and developmental (e.g. Hypothyroidism, Cushing's syndrome) disorders, or inflections. These are also useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of

The sequence is that of telomerase protein plo5, it can be used to screen for agents, e.g. antibodies, that modulate binding of human telomerase to treat conditions area.

Treat conditions such as cancer, restenosis, inflammation, myocardial infarction, glomerulonephritis, transplant rejection and infections (e.g. with human immunodeficiency virus), while those that are agonists can be used to extend the life of proliferation-restricted cells, especially normal somatic cells, e.g. in cases of hypersensitivity or atrophy, also to improve production of recombinant proteins by maximising cell density and survival and expansion of precursor cells being used for bone marrow transplants. They may also be used for diagnosis. Other uses of telomerase proteins are isolation, enrichment and concentration of telomerase proteins, as immunogens; in therapy; as reagent where ascent oligonucleotides of known structure are needed (e.g. for tagging tolerance. The agents and for regulating cell growth/density specific, e.g. they are selective for cancer cells without harming somatic cells.
                                                                                                                                                                                                       New nucleic acid encoding human telomerase protein p105 or its fragments - used for therapeutic modulation of telomerase activity and for screening for potential modulators of telomerase-target binding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

isolated from human cells or expressed in host cells using native plos cDNA (see AAV05369), or optimized synthetic sequences (see AAV05370-72). The invention provides methods relating to human telenerase and related nucleic acids, including the submini proteins pl40, pl05, p48 and p43. The invention also provides isolated telomerase and related primers capable of specifically hybridising with the telomerase gene, telomerase specific binding agents such as specific antibodies, and methods of making and using the subject compositions in diagnosis (e.g. genetic hybridisation screens for telomerase transcripts), therapy (e.g. genet therapy to modulate telomerase gene expression) and in the biopharmaceutical industry (e.g. reagents for screening chemical biopharmaceutical industry (e.g. reagents for screening chemical instruction, agents). Modulation of telomerase expression can be used for the treatment or prevention of cancer, restenosis, inflammation, myocardial infarction, glomerulomephritis, transplant rejection or infections (e.g. with HIV). Telomerase proteins can also be used in the isolation, enrichment and concentration of telomerase RNA proteins, as immunogens, in therapy, for regulating cell growth/density tolerance and correct and concentration of telomerase RNA proteins, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-d' primer and an oligonucleotide complementary to the
complementary strand of a polynucleotide which comprises one of the 5602

nucleotide sequences defined in the specification, where the
oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 3'-end sequence, where the
oligonucleotide which comprises a 3'-end sequence complementary to a
polynucleotide which comprises a 3'-end sequence (where the
coligonucleotide comprises a 1-bast 15 nucleotides and the compination of
the 5'-end sequence/3'-end sequence is selected from those defined in the
specification. The primer sets can be used in antisense therapy and in
cympactical and/or diagnosis of the abnormality of the proteins encoded by
the full-length cDNAs. The primers are also useful for the
convamination and/or diagnosis of the abnormality of the proteins encoded by
the full-length cDNAs. The primers are also useful for the
convamination and sequence of the abnormality of the proteins encoded by
the full-length cDNAs. The primers are also useful for the
convamination and sequences and methods. AAH03166 to AAH03628 and
AAH03631 to AAH03623 to AAH03628 and

The invention relates to forming (M1) an isolated ribonucleoprotein (RNP) complex (C), involves contacting an RNA affinity substrate (S) comprising an RNA affinity substrate (S) comprising an RNA sesembly sequence (AS) and an affinity tag, with a protein mixture to permit formation of (C) on AS, subjecting (C) to chromatographic separation, and subjecting (C) to affinity selection, where the affinity tag (C) to affinity matrix. Also included are maltose binding protein) binds to an affinity matrix. Also included are an isolated spliceosome preparation (isolated by (M1)), a RNA comprising complexe, binding site and at least one phage coat protein (M2) a subject having a disorder associated with abnormal RNP complexes (by obtaining a sample of cells from a subject, purifying RNP complexes (by containing a sample of cells from a subject, purifying RNP complexes from the cells of the subject (M1), determining the presence in the council of the subject (M1) is useful for forming an isolated RNP complex, an mRNA editing complex, an intron complex, or an H complex, (M1) is useful in a diagnostic assay for determining whether a subject has a border associated with abnormal RNP complexes (M1) is useful for treating a subject has a disorder associated WNP complexes (M1) is useful for treating a subject has a complex, a reverse transcriptions of purely and a gene splicing manner of the complex a reverse transcriptions of purely and proposed complex a performed RNP complexes (M2) is useful for treating a subject has a protein complex, a reverse transcriptions complex a gene splicing manner of the proposed complex and a purely complexes (M2) is useful for protein complex a reverse transcriptions complex a gene splicing manner of the proposed complex and a purely complexes (M2) is useful to the proposed complex and a gene splicing manner of the proposed complex and a gene splicing manner of the proposed complexes and the proposed complexes of the proposed complex and the proposed complexes of the proposed complexes of the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     complex. The present sequence represents a putative novel human spliceosome associated protein (SAP) isolated by the methods of the invention. Otes: The prsent sequence is not shown in the specification but was obtained from Genbank or Swissprot using the information provided
                                                                                                                                                                                                                                                                                                                                                                                                      Isolating ribonucleoprotein complex, by contacting RNA affinity substrate having ribonucleoprotein assembly sequence and affinity tag, with protein mixture, subjecting complex formed to chromatography, affinity selection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Saccharomyces cerevisiae; complementary peptide; peptide identification;

                                                                                                                                                                                                                                                                                                                                                                             The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher evararyotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents durgs for drug discovery and as lead ligands for drug design and sevelopment. The present sequence is a complementary peptide from Saccharomyces cerevisiae
                                                                                                                                                                                                                                                                                                Identifying complementary peptides by analysis of protein and nucleotide sequence databases, useful in drug design.

selecting target and target binder pairs for preparing a composition for treating cancer. Furthermore, the method may be utilised during gene therapy procedures. The current sequence is that of the cancer-related DGI-2-binder peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel method of selecting target and target binder pairs comprising mixing in a reaction vessel phage expressing biological targets and phage expressing target binders, each having distinguishable selection markers and selecting target and target binder pairs based on the selection markers. The molecules of the invention demonstrate cytostatic activity whilst the method may be useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Modified peptide; therapeutic agent; fusion; Fc domain; cancer; autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VBGF; immunosuppressive, EDO; TPO; CTLA4; mimetic; IL-1; TNF; antagonist; MMP; inhibitor; erythropoietin; thrombolytin; interleukin 1; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase; asthma;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   for treating inflamments and autoimmume diseases, tumour growth, cancer, the until arthuritis, diabetic retinopathy, obssity, sleep disorders, infertility, and neurological degenerative diseases. (1), comprising Evonamentic compounds are useful for treating disorders characterised by low compounds are useful for treating disorders characterised by low compounds are useful for treating conditions that involve an existing megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet under which result in thrombocytopaenia, systemic lupus erythematosus, and Fanconi's syndrome. ABB73403 to ABB73426 and ABB73456 to ABB35777 represent amino acid and nucleic acid sequences used in the
                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a vehicle-peptide molecule (I) or its multimers. (I) can have antiinflammatory, antitumour, immunosuppressive, eytostatic, antihrbeumatic, antiarbritic, antidiabetic, ophthalmological, antianaemic, anorectic, antiinfertility, haemostatic, dermatological and neuroprotective activities. (I) can be used as a therapeutic or prophylactic agent as well as for screening purposes. (I) is useful for diagnosing diseases characterised by dysfunction of their associated protein of interest, for identifying normal or abnormal proteins of interest, as a part of diagnostic kit to detect the presence of their proteins of interest in a biological sample. Additionally, (I) is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cytostatic; cancer; gene therapy; DGI-2; DGI-5; DGI-7; DGI-9; Hras; leptin; VEGF; vascular endothelial growth factor receptor; VEGF-R1; VEGF-R2; VEGF-R3; FLT1; FMS-related tyrosine kinase 1; FLK1; KDR; KInase insert domain protein receptor; EGFR; epidermal growth factor; RGFR1; fibroblast growth factor; Tie-1.

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyellis), uveitis and endophthalmitis. The acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies pelecific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for the intention of the printed specification, but was the intention of the intention of the printed specification, but was the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intention of the intentio
